

Clock system for Healthcare

Wellcome Trust

Overview

The company bought radio controlled clocks but they couldn't work on their building due to the location (Central London) and the building structure (metal & glass).

Customer requirements

The customer was looking for a simple system with battery operated clocks.

Bodet recommendation

We have recommended our wireless clock system with the Profil 930. Simple and smart design, the profil 930 clock is a battery operated unit.

With the wireless technology, all the clocks are 100% accurate with no interference or interruption generally associated with standard radio controlled clocks.

Benefits:

- No interference or interruption like radio controlled clocks
- Reduce costly maintenance (automatic summer and winter changeover).
- Extendable system (no limitation of the number of clocks on the system)
- Reduce confusion and inefficiency by synchronising time throughout all floors

The wireless signal is part of the licence free ISM band (Industrial Scientific and Medical) according to ETS 300-220. No interference with other electronics equipments guaranty.
